Imprint measurements, retraced visit.
The first report could not photograph the possible imprint. I retraced the same ground and found the shape again, this time with a ruler in the frame.

Measurements:
- Length across the imprint: 9 cm.
- Depth of the clearest mark: about 1.5 cm at the deepest point.
- The shape is parallel to the bedding of the stone.

What I brought:
- A photo showing the ruler in the frame for scale.
- A second photo from a different angle.

The measurement is my own. It does not change the earlier report; both visits remain separate records of the same place.
